How to Test the QC Checklist Against This File

- Run your QC engine against the MISMO XML (Doc 09) — the 5 defects are explicitly encoded so a rules engine can catch them without OCR.
- For a full workflow test, feed the PDFs (Docs 01–08) through your document extraction / OCR pipeline and compare the extracted data to the MISMO XML.
- Use the answer key above to score coverage: which QC rules from the Citizens checklist actually fired vs. which defects went undetected.
- Add or remove defects by editing the XML fields called out in the 'Where Visible' column and regenerating the corresponding PDF.
